## **Abstract**

Disclosed is a process for the production of biologically degradable plastics, especially aliphatic polyester amides. Said process is characterized by thye fact that the aliphatic polyester amide is placed in a solvent mixture containing: A) C<sub>1</sub>-C<sub>4</sub> alcohol, B) C<sub>1</sub>-C<sub>6</sub> ketone and/or C) aromatic carboxylic acid or salt thereof. The solutions obtained can be used in the production of films for the coating of substrates and as adhesives.
